Zero-Risk Infrastructure Auditing

Stop Bleeding Capital on Unoptimized Cloud Architecture.

We silently audit and optimize your infrastructure to cut **AWS/Azure spend by 20% to 35%** while building automated, bottleneck-free CI/CD deployment pipelines.

Estimate Your Instant Monthly Savings — 20% - 35% Optimization

Current Monthly Cloud Spend: **$25,000/mo**

$5k/mo — $100k/mo — $200k+/mo

EST. MONTHLY SAVINGS	EST. ANNUAL RECOVERED CAPITAL
$5,000 - $8,750	$60,000 - $105,000

✓ Zero Downtime ✓ Strict Int'l NDA ✓ 100% Background Execution

EXECUTION ARCHITECTURE

The Two-Pillar Service Matrix

Targeted technical intervention aimed at immediate cloud waste reduction and software deployment modernization.

PILLAR 01

FinOps & Cost Intelligence

Complete visual transparency and programmatic elimination of unnecessary cloud billing, tailored specifically for AWS and Microsoft Azure infrastructures.

Orphaned Resource Elimination
Locating and safely terminating unattached EBS/managed storage volumes, unassociated Elastic IPs, and forgotten idle dev servers.

Workload Rightsizing
Shifting over-provisioned compute configurations into slim, cost-efficient spot or Graviton/ARM environments with automated auto-scaling.

Tagging Architecture & Transparency
Establishing strict tagging models so CFOs and engineering leads pinpoint exact cost allocation down to team, environment, and feature.

Average Spend Reduction: **-20% to -35% Guaranteed**

PILLAR 02

CI/CD & Automation

Transform slow, manual server maintenance into rapid, resilient, and reproducible code-driven pipeline architectures.

Automated Assembly Lines
Configuring rapid, zero-trust GitHub Actions, GitLab CI, or Jenkins pipelines with automated security scanners and test gates.

Infrastructure as Code (IaC)
Standardizing server environment provisioning using highly modular Terraform, OpenTofu, or AWS CDK blueprints.

Deployment Velocity & Reliability
Slashing developer wait times from hours to minutes while establishing zero-downtime blue/green or canary rollouts.

IaC & Pipeline Tech: **Terraform • GitHub Actions • Docker • Helm**

zettacloud-finops-pipeline.tf — ✓ Automated Optimization Active

```
module "infrastructure_optimization" {
  source                 = "zettacloud/finops/aws"
  auto_prune_unattached_ebs = true
  rightsize_ec2_instances   = true  # Converts bloated x86 to Graviton3 spot clusters
  target_savings_threshold  = "30_percent"
  ci_cd_deployment_mode     = "zero_downtime_blue_green"
}
```

SEAMLESS ONBOARDING

The "Zero Friction" Delivery Process

No intrusive code rewrites or operational disruption to your ongoing engineering sprints.

01

The 15-Min Scan

We securely review read-only high-level infrastructure billing data under strict confidentiality and zero production access.

Time commitment: 15 Minutes

02

The Blueprint

Our cloud architects present an exact optimization roadmap mapping out precisely where waste lives and specifying guaranteed dollar savings.

Turnaround: 48 Hours

03

Silent Optimization

Our engineers deploy code-driven Terraform and CI/CD automations cleanly in the background without disturbing your core development pipeline.

Zero Team Disruption

Ready to Reclaim 20% to 35% of Your Cloud Budget?

Join enterprise engineering teams who optimized their AWS/Azure infrastructure with zero downtime.
